

Migration Manager for PSTs

ZeroIMPACT migration of PST files to Exchange 2010/2013 or Office 365

Compliance and e-Discovery in managing email stored on user computers is a growing challenge for messaging administrators. Plus large PST files can be prone to corruption, creating the potential for data loss and even compliance issues.

Migration Manager for PSTs allows IT administrators to identify, filter and migrate PST files to primary or archive mailboxes in Exchange 2010/2013 and Office 365, quickly and reliably. Its agent-less capabilities help you target the exact mailbox or archive for migrating PST files and run any

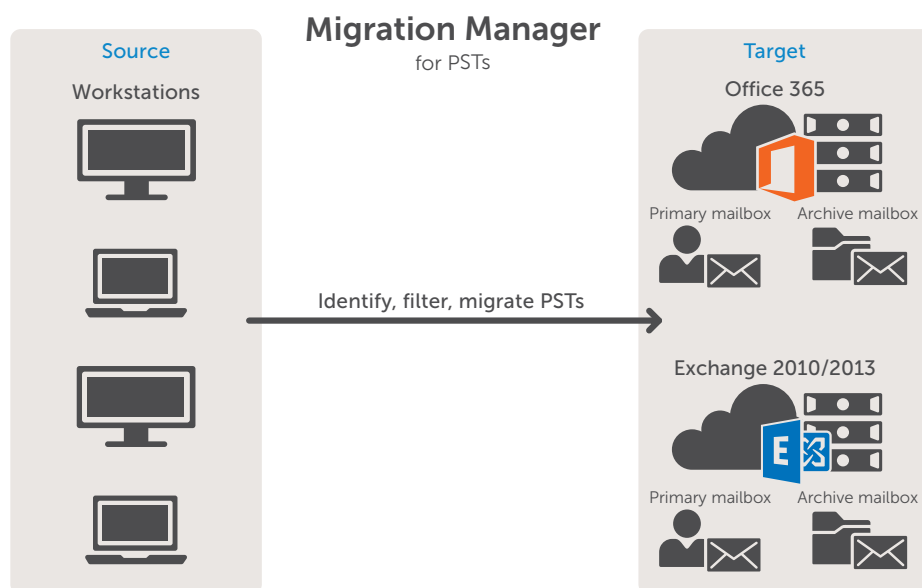

necessary filters. You can migrate either the entire PST file or a portion of the file, giving you the flexibility to enforce email retention policies or reduce migration time.

Migration Manager for PSTs makes performing migration easy, quick, and seamless with no need for copying files to a central location. It's a user-friendly solution that gives you the control you need over your PST file migration to reduce the risk of data loss, enable e-Discovery, enforce email retention policies and ensure compliance.

Migration Manager for PSTs makes performing migration easy, quick, and seamless.

Benefits:

- Simplify PST migration and eliminate reliance on native tools
- Shorten project timelines and reduce costs
- Enforce email retention policies and meet compliance
- Mitigate data loss or downtime risk and ensure ZeroIMPACT
- Identify migration issues in real-time so you can resolve them quickly

Features

Supported Platforms – Migrate PST files to primary or archived mailboxes in Exchange 2010/2013 or Office 365.

Supported PSTs – Migrate data from all available types of PST files, including Outlook and those exported from the Exchange server.

Advanced Detection – Identify PST file locations and owners on workstations and servers throughout your environment so you can choose the correct migration destination.

Filtering – Control the content of data migrated from the PST file with advanced filtering capabilities so you can reduce the file size and speed migration.

Direct-path Migration – Move data directly from desktops, through the migration server, and to the destination data store. This reduces the risk of duplication or data loss that you get with other two-step migration tools.

Agent-less Detection – Eliminate the need for a complex deployment of agents across a network, requiring fewer resources and avoiding an impact on bandwidth usage.

Multi-threaded Performance – Migrate multiple PST files simultaneously so you can scale performance and quickly migrate a large amount of data.

Multi-account Support – Use multiple admin accounts when connecting to Office 365 to overcome the limitations of concurrent connections through web services.

Project Management – Real-time alerts and logging help you troubleshoot and resolve migration issues quickly.
